GUIDE TO WEED FREE GRASSLAND

UpRoot

	Weed	Application Notes
	Nettle	Treat actively growing nettles up to 300 mm height and before flower buds appear
	Dock	Treat actively growing docks at rosette stage up to 250 mm width or height and before flower buds appear
	Thistle	Spray at Rosette stage; up to 200 mm width or height
	Bramble	Use high water volume up to 400 litres per hectare. Treat before onset of plant senescence
	Buttercup, Dandelion, Willowherb, Clover	Treat actively growing weeds ideally before flowering

For use on land to be grazed by cattle or sheep. UpRoot may be used prior to cutting for silage or hay provided a minimum of 14 days has elapsed between spraying and cutting. Treatment can take place following cutting after allowing a minimum of two weeks for weed regrowth.

Application Rate: 2.5 – 4.6 litres per hectare
Keep livestock out for 14 days after spraying
